

# Nutrient Cycles Foldable

Create a foldable of the following Nutrient Cycles: Water Cycle, Nitrogen Cycle, and Carbon Cycle.

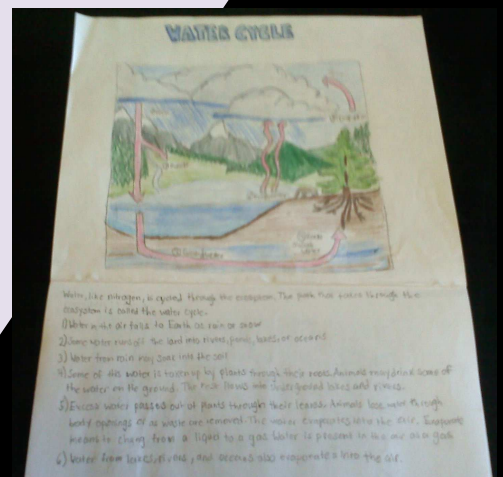

To create the foldable to the left I used two sheets of paper. The first sheet of paper I folded almost in half leaving enough space to write the name of one cycle in the space between the two ends of the sheet of paper. The second sheet I folded around the first sheet. The words "Nutrient Cycles" and "Water Cycle" are written on the second sheet of paper that I folded (in the example on the left). The words "Carbon Cycle" and Nitrogen Cycle are on the first sheet of paper that I folded.

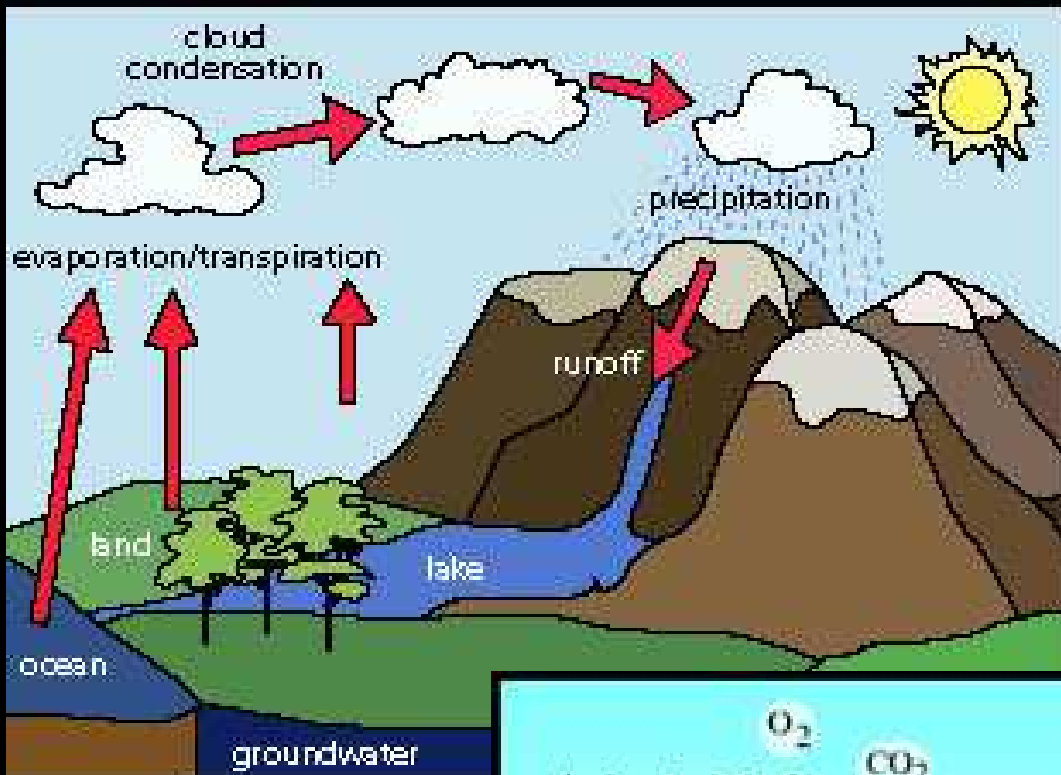

Each page of the foldable should have a picture (drawn by you) on one half of the page and a written description on the other half of the page.

Repeat for each cycle so when you are finished you will have a title page, three cycle drawings and three cycle descriptions.

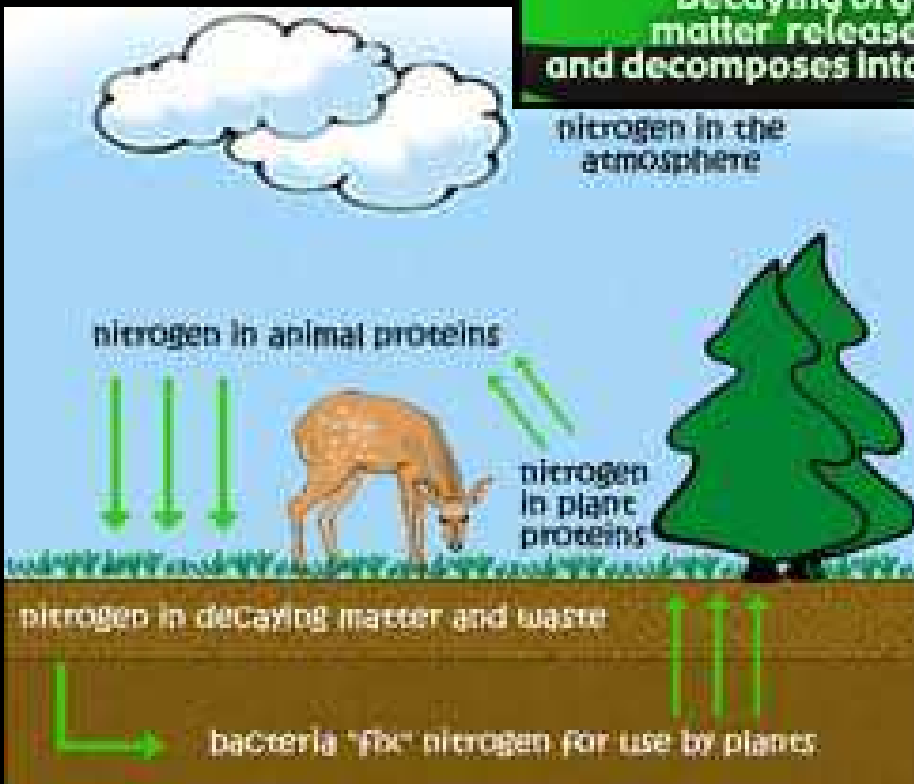

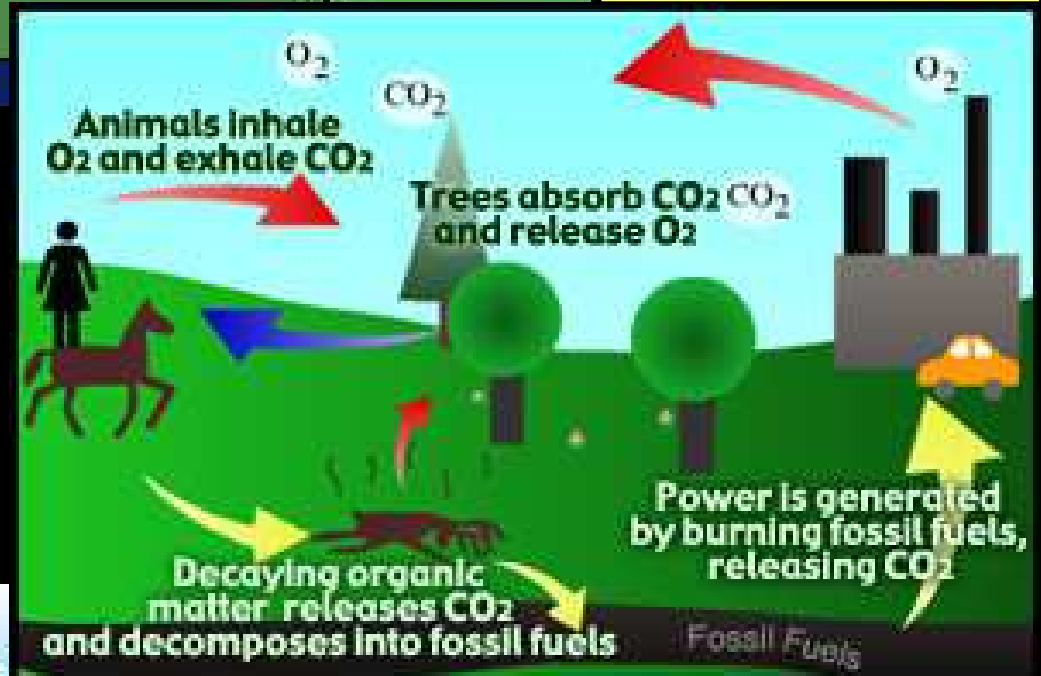

# Water Cycle

You may use the pictures I have provided for your drawings or you may search for your own on the internet. The book and the internet will help you with your descriptions.

# Carbon Cycle

# Nitrogen Cycle
