

The Continent

Name _____

This map represents an imaginary continent. Don't look for it on a map of the Earth you won't find it! The latitudes are indicated by lines running horizontally through the map. The equator, for instance, is indicated by the line marked 0° . Referring to your notes, book, and the PowerPoint, cover the map with seven different kinds of biomes. Draw plants, animals, (both biotic factors) and geological features (abiotic factors) to show the nature of each biome. Make sure your choices of regions are realistic. For example, you wouldn't find tropical rain forests in polar regions.

90° (North Pole)
